Moving eastward across Northern Greece, I learned from the agricultural officials of Serrai (in Macedonia) that more and more unwilling people there were being forced to get rid of their farms and go down to the cities. This is not because of any lack of love for the soil but because the yields in the mountainous areas make it impossible to earn a living. Economic necessity has forced a change of location, but not yet a change in attitude. One official compared Macedonia and Thessaly, with respect to attachment for the land: "I would say that there has been much greater security through the years in Thessaly, which has led to more fondness for their fields; here in Northern Greece the constant uprooting of families has created an uneasiness and therefore a tendency for people to part with their land."

In Thrace, farther eastward, the peasant is still attached to the soil but "he is not stuck to it absolutely body and soul," as one peasant expressed it. These areas of Macedonia and parts of Thrace depend largely on growing Oriental tobacco, a commodity sometimes moving slowly on world markets, with agricultural depression a serious consequence. Here the man-land bond is loosening.

The peasants living at the head of the Chalkidike peninsula (central Macedonia) around Polygyros, the capital of the prefecture, enjoy relative prosperity and are not willing to leave their land. Nor is there any desire to emigrate, although five or six families have sent sons to Italy to study agriculture and veterinary science in the expectation that they would return better prepared to improve agriculture and kindred pursuits.

In the rich plains of Thessaly, south from Macedonia, the mechanization of agriculture is apparent everywhere. When harvests are good, people are optimistic about the future, secure about their food supply. Peasants there have invested heavily in tractors, which have had an interesting effect on attitudes toward the land. In this area of good soil, where scientific farming is increasingly practiced, the basis of the attachment is changing from the traditional idea of land ownership as a sacred trust closely bound in with the fortune of one's immediate family to a view of land as a source of financial gain. Here in Thessaly the rural man is changing from peasant to farmer, in contrast to the hard-pressed people in the northern mountains who are forced to move to cities for bread and, far away from their land, still cling to peasant values.

When a peasant in Central Greece was asked what a family from his village would do if it received $500 from America, he said: "A man would be more apt to buy fields rather than improve his home; of course, if his house leaks and he has enough land, he would start with the house but, generally speaking, a peasant from my village thinks it more important to own more land than to build a big house. Of course, we do have another

Thrace

land but work rented land or as farm laborers; and three are in business (baker, coffeehouse proprietor, and dressmaker). Some of these landowners, in addition to farming, run a local business, or practice a trade such as carpentering and smithing, but their basic orientation is toward the land.

Being farmers, one might assume that they could grow some of their own food. A few manage to do this. Of the 589 acres of cultivated land belonging to the village people, 338 acres are in tobacco. This cash crop, therefore, takes up about 57 percent of all arable land. Corn accounts for 187 acres, vegetable gardens 25 acres, potatoes 20 acres, alfalfa 6 acres, and other crops 13 acres. But no matter what methods one uses in Dafnon, it is impossible to grow enough food for 1145 people on the shallow land. There are two ways out: first, grow a cash crop such as tobacco, sell it, and use the income to buy food and other necessities; the second is for a large number of families to be resettled elsewhere and thus provide sufficient land for those that remain. The latter suggestion is impossible, since other rural areas are also overcrowded and the opportunities in the cities are not yet equal to the demand of those making the exodus from the rural areas. Indeed, cities have been discouraging the influx of new families in search of work.

This leaves only the other possibility of getting most of the family income from tobacco alone. Here, again, the tobacco producer is caught at the mercy of the market or in the "price scissors." Without food of his own production, he has to sell his tobacco at any price offered simply in order to have bread for his children. The producer, according to this study of Dafnon, knew that tobacco prices, including the premium paid by the state, had risen over prewar prices 260 times. This was small consolation for, in reading *Vema*, an Athenian newspaper dated December 14, 1951, he also learned that costs of foodstuffs had risen 425 times, clothing 554 times, fuel 394 times, sundries 367 times, manufactured goods 467 times, and imported supplies 416 times.

It is difficult to grow tobacco, particularly the Oriental type (Basmas variety) that requires so much manipulation, leaf by leaf, with an average leaf being four inches long and two and one-half inches wide. The first plowing is usually done in February or March. Seedbeds are heavily manured, and the seed is well mixed with sand and ashes, then sown. The beds are pressed down by foot for better germination; sieved manure is scattered over them; and the beds are watered. This watering is continued, usually morning and evening, until the end of May when the plants are ready to be transplanted. Because of this need for water, the beds are always located near some accessible water supply.

The tobacco fields are usually plowed under three times before the tobacco plants are set out. The same fields are used for tobacco year after

## Harvesting Olives in Southern Greece

During my travels in Greece I have passed countless olive trees, for they hug the coasts, crowd the islands, and thrive inland where the climate is mild enough. But I never really understood the significance of the olive tree until I visited an estate in Southern Greece where three thousand trees of about seven varieties provided the only income.

I had already learned that over 12 percent of the caloric intake of the Greek people came from olives or olive oil; that Greece produced in 1948–1950 an annual average of 47,000 metric tons of table olives, chiefly in Thessaly and Central Greece; that the smaller oil olives, grown elsewhere in the country, accounted for 103,000 metric tons annually of this precious oil, which was bought and stored as a financial reserve whenever the currency became the least bit shaky. The oil olives also produced another 12,000 tons of residue oil. Friends had said that olive growing was a story of "from rags to riches," since one year might bring an outstanding crop and the next a disastrously poor one,* but that this was one of the accepted features of growing olives.

Some inquiring students think the olive was in Greece before the goddess Athena, with whom it is so closely associated in myth, and was originally associated with the cult of Erechtheus. Be that as it may, the olive — the "All-Dewy One" — has held a special place in the tradition of the Greek people. They have also come to know that olive growing is much more than storytelling or the writing of descriptive poetry; it is hard work. In Thessaly, around the Gulf of Volos, it was interesting to watch men plow underneath the trees and fertilize the soil to increase the olive crop; to see on the western coast of Greece and in the Peloponnesos how the peasants irrigated the fifteen to twenty trees that each might own, thereby adding to the quality and the size of the fruit. In Attica one could watch the men expertly trimming the tree so that it would bunch as it grew, making harvesting a simpler task. In the Ionian Islands, where the air is humid and growth more lush, the trees reached much higher, causing the people there to wait for the olives to fall after ripening rather than pick them directly from the tree. "A lazy man's way," said a mainland peasant.

Like many things of importance, the olive harvest has a slow beginning. In October, walking through the olive groves of this estate, one could see the table varieties beginning to ripen. The Kalamata olive was one. At first, the few workers on the estate gather the olives falling to the ground, but within a week's time they begin to gather some from the trees. It is then that the girls from the surrounding villages make their gay appearance. Not many are married, for this would show that their husbands were

* Compared to the 1959–60 figure of 156,000 tons of oil, 1960–61 showed 75,000 tons.

Vasilika

professor who has become the principal of his gymnasium. In 1961, however, the son of a rather prosperous village farmer became attracted to a daughter of another Vasilika farmer with good land holdings. The young man asked his father to arrange the marriage for him, and, since all the conditions were entirely suitable, the young couple were engaged.

The trend in favor of town husbands prevails, however, among most of those who can afford it. Once a few girls had married urban men, the rivalry between village families led to greater efforts to secure town husbands for the others. Consequently, there has been an inflation in dowries which is alarming the villagers themselves. In the early 1950's, a *prika* worth $3,000 was enough for a town husband of no special prestige; by the late 1950's, the same kind of man was asking for one worth $4,500.

The inflation has had several consequences. Often the value of the dowry can no longer be limited to the share of the inheritance to which a girl is entitled. Farming sons are willing to give up some portion of their shares so that their sisters can "live well," as they put it. The brothers gain also from the added prestige and influence of the family. These in turn may make it possible for them to find a girl with a larger dowry than their property qualifications might warrant. A farmer so situated may make higher demands on the ground that his and his wife's children will have an urban aunt and uncle. The town sister might provide board for her nephews and nieces (girls are increasingly being sent to gymnasium) while they are in school and can also be expected to help them find jobs.

Another consequence of the dowry inflation is the increasingly late age of marriage for the village girls and the town men. It takes farmers longer to accumulate the larger amounts of cash for the dowry, and the prospective grooms longer to attain a position or income at least partially commensurate. Vasilika's girls who marry town men are usually between twenty-five and thirty. Those whose fathers have few land holdings, and consequently can offer only small dowries, have been marrying farmers from other villages or within Vasilika itself and have been in their early twenties at the time of the engagement.

Now let us consider the disposition of the dowry which goes with a girl marrying a town husband. First, if he accepts land as part of the dowry, he will of necessity have it worked by his wife's male relatives. In time, however, often by the end of the first decade of the marriage, the son-in-law may wish to expand his shop, or may wish to start building a house for himself or for his daughter's dowry, or may hear of a good investment opportunity. He will want money for these purposes, and so he begins, with his wife's consent and after consultation with her father, to arrange for the sale of dowry lands. Since the 1950's, prospective town grooms have been less willing to take land which they know they will eventually want to sell, and have been asking for cash or for a house in town. Anticipating this situation, several of Vasilika's farmers who have small daughters have begun to use their savings and even to sell a little land in order to build houses in Athens or in a provincial town so that by the time their daughters are ready to marry, the houses will provide the main portion of the dowry.

[Village Life]

the world that could offer an attractive chance to an impecunious peasant boy also put legal barriers in the way, so that this escape from the deteriorating position of the hill villages of Greece was rather abruptly cut off.

Within Greece, the growth of towns and a modest development of industry, which scarcely antedated the 1920's, offered an escape for a few of the surplus hands that had appeared in the hill villages. But this was by no means adequate to take care of the problem. Not only was the growth of industry and urban occupations comparatively slow, while the rate at which the peasant population grew was high, but even more important, in 1922 and 1923 Greece was compelled to accommodate more than a million refugees from Asia Minor – people who had been uprooted from their homes by the Turks as a consequence of the war between Greece and Turkey which lasted from 1920 to 1922. Many of these refugees had followed urban occupations in Asia Minor, and clustered naturally in the larger cities of Greece, where their skills and entrepreneurial energy frequently opened paths to them which were closed to the ordinary Greek peasant seeking employment away from home.

It was therefore not surprising that Greek peasants, especially those cooped up in hill villages, exhibited a growing distress and bafflement during the 1920's and 1930's, since their traditional patterns of life no longer sufficed to bring wonted results. The world depression of the 1930's hit Greece hard, and contributed to the collapse of parliamentary government in 1936, when General John Metaxas established a dictatorship. Metaxas attempted to relieve the economic problems of the country by launching an ambitious program of public works, especially road building; and the expansion of the army and gendarmerie which he carried through also afforded careers to a number of young men from poor hill villages. But this was palliative rather than cure. When the second world war came, followed by Ital-

[Town Life]

565 578 669 generosity and kindliness did something to redeem the balance, but were comparatively rare. The wealthy classes did not, as a rule, show much sign of social conscience or sense of obligation to the poor. Once again, the solidarity and exclusiveness of family sentiment interfered with larger loyalties and sympathies. The result was that antagonism between rich and poor broke out into the open during the war years, and has never since ceased to trouble the political stability of the country.

458 465 578 Economic conditions have been acting, for at least fifteen years, to sharpen this feeling. Since 1941 Greece has experienced a series of monetary inflations that raised prices, sometimes rapidly, sometimes more slowly, but always faster than adjustments were made in wage and salary scales. As prices outran wages, workingmen faced a series of crises, the more serious because their wage rates were low to begin with. Adjustments of wages, when they came, relieved the problem only temporarily until continuing inflation once again robbed the currency of part of its purchasing power.

The economic plight of white-collar employees was nearly the same as that of manual workingmen, for they, too, had to live on an income that regularly lagged behind the price level. [554] Moreover, the fact that such persons had gone to school, and therefore felt they had a rightful claim to superior social status, did not make it easier for them to face a life of poverty. The fierce struggle to win a place in the government civil service was only matched by the chronic discontent of those who had succeeded in getting government jobs and then found that they could scarcely live on their salaries.

578 669 [565] Fortunately for the political stability of the country, wage earners and salaried classes are a minority in Greece. This is no more than a corollary of the small size and family character of most Greek economic undertakings. Nevertheless, if one adds the hillsmen of the countryside as a third more or less chroni-

6: McNeill H-5 (1947, 1956) 1957
EH1 Greece EH1

lems Greece confronted. Inflating the currency to pay current running expenses and to finance a modest program of government capital investment proved far more palatable politically, even though such a policy penalized the salaried and wage-earning classes, and led to recurrent crises as the price level outran their incomes.

Greece shares this problem with other underdeveloped nations in which population growth tends to equal or outstrip increases in productivity, while at the same time superficial contact with modern economic ideas has convinced leaders of public opinion that poverty is neither inevitable nor necessary, but can and should be relieved by government action. Under these circumstances, the processes of parliamentary government are most unlikely to turn up politicians who dare to contradict the immediate desire of the electorate for an improvement of living standards. Political irresponsibility toward fundamental economic problems, of a type so widespread in Greece, is a normal and all but inevitable result.

To 1956, at least, the discrepancy between the tenor of political debate and the planning of technicians in the economic ministries of the Greek government seems to have had only slight effect upon the practical realization of economic plans. In some cases, the fact that the minister was so often distracted by the exigencies of the political game may even have given civil servants a freer hand than they might otherwise have had. But if this was so, the major reason for it was the existence of the American aid mission, and the ultimate dependence of most economic advance upon grants from American authorities. That is to say, a senior civil servant, when confronted by his minister, could always point out that if his plans were not approved, then there might be a reckoning with the Americans, whose ideas about how the Greek government should try to shape the economy had much in common with the civil servant's approach, and little with that of the politicians.

/60 cont./ 241 242

Rotation of crops is neglected due to the high price of wheat. The best land is put into wheat and the poor land into oats and barley. The recent introduction of vetch may revolutionize the rotation system and may help answer the livestock management problems.

The Local Groceries. Out of five groceries two have closed due to depression years of 1930-33. The three groceries are doing well only on books. Their /61/ non-collected capital exceeds 3 times their active capital. The cooperative grocery gives keen competition but its credit is limited to members and it has a successful way of collecting the debts at threshing time with the cooperatives' threshing machine. Just before threshing the three local groceries treat their customers with wine and whisky so as to be able to collect their debts. All kinds of methods are used at harvest time. 444 452 [458] [474] [273]

The local grocery owners do their farming too and in most cases all their farming jobs are done by the farmers in paying their debts. No grocery man could make his living out of grocery business alone, but keeps it for spending his leisure time. [241] [463]

## PART IV. HABITS OF CONSUMPTION

Household Expenditures. People who lose all they had two to four times in their lifetime will not want to buy anything unless its need is essential. Life is more or less simplified and the household expenditures run very low. In one of the accounts we find that for household expenditures the farmer spent 2.500 drs. ($16.66). This sum is too high. We must remember that these farmers were just settled and had nothing whatsoever to start with. 511

/62/ A few small chairs, a rough table, a few wooden spoons and a few copper kitchenware make the kitchen's utensils. Pictures of a few relatives and their own hang on the wall with a few handmade embroideries. [352] [415] [353] [531]
